

MC-200

# 电动机故障检测仪

MC-200 is the improvement of the MC100, enhanced with the functions of doubled frequency checking and phase angle checking. It can quickly detect the faults in all kinds of motor coil, such as single-phase coil, tri-phase coil and give out reliable results. The voltage applied for insulation checking reaches 1000V, rather compliant with the user's requirements.

在 MC-100 的基础上增加了倍频和相角检测功能，能快速判断各种三相、单相绕组的故障，确诊率高。绝缘检测时测试电压达 1000 伏，更符合用户要求。
